

What type of aluminum can I recycle?

Aluminum is infinitely recyclable. Since 1888, nearly 75% of all aluminum created is still in use today. In manufacturing, the aluminum used in buildings, cars and planes is recycled at high levels. As a general consumer, what types of aluminum can you recycle?

- Aluminum beer and beverage containers
- Aluminum bottles
- Aluminum foil
- Aluminum can foods, such as SPAM
- Aluminum pet can foods
- Aluminum aerosols, but make sure the can is empty and the sprayer is removed

Do not assume that a container that looks like steel IS steel. Many products are made from aluminum!
